

# Adelaide Railway Rejuvenation

CATEGORY: HERITAGE

SKS Technologies were thrilled to be involved in the rejuvenation of the iconic State Heritage listed Adelaide Railway station.

The Adelaide Railway Station is an iconic State Heritage listed building owned by Renewal SA. The overall aim of the project works was to uplift and rejuvenate the Station & the surrounding public realm to transform the Station into a place where people want to spent time & not just pass through.

The project involved the extensive external restoration program on the Western, South-East & Eastern Facades. In conjunction with these works an Architectural lighting package was implemented to improve the night time visual appearance of the station, highlighting the heritage grandeur of the building & to create a strong presence on North Tce. Internally the Upper ramp was rejuvenated to its former heritage character with the demolition of top two tenancies and the installation of custom Architectural lighting to highlight the stunning heritage ceiling. The main concourse area was refreshed with the installation of discreet Architectural lighting - linear LED to wash up nibs of niches and low glare spotlights softly up light onto feature ceilings. The existing heritage pendants & Seppelt's wine sign were reconditioned. Site upgrades/ replacement were completed to site distribution boards and associated wiring and works along with installation of site UPS to provide backup support for main fire doors and dedicated lighting control systems.

SKS Technologies were awarded the Commercial - Medium category at the NECA SA/ NT 2022 Excellence Awards for the work on this project.
